

IFN701 Demonstration Instruction

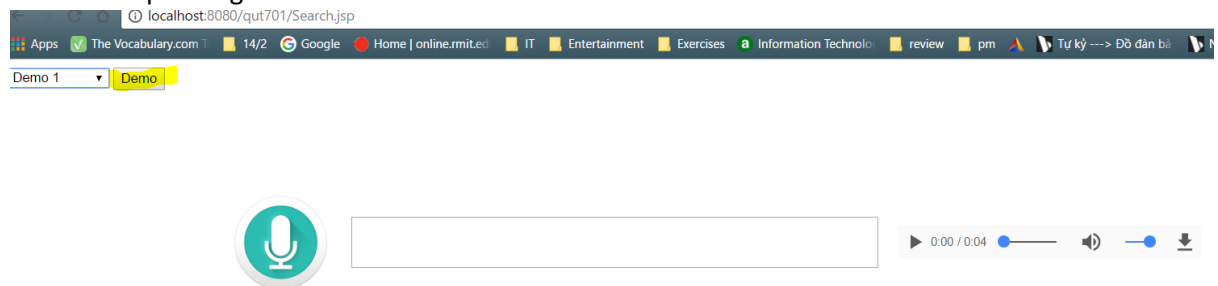

1. Record voice in audio file using WAV format
2. Convert to the correct format which is accepted by Sphinx4: 16KHz, 16 bit, mono channel.
The following web application can be used for converting: <http://audio.online-convert.com/convert-to-wav>
3. Name the files as “demo1”, “demo2” or “demo3” (the application will just use these 3 files for demonstration) and replace files under the folders : ifn701\WebContent\demos\

4. Select files for demonstration as shown below in the image to load the recorded file

5. Then press the button “Demo” to send the audio content to the servlet to recognize then wait for responding from the server

6. And it is ready to use
